

AUTOMATIC FILM APPLICATOR

Description

Constant and defined film thicknesses are the precondition for the testing and analysis of coating materials and coatings. Many properties of these materials depend on the film thickness. Manual applications may have irregularities caused by changing of the pressure or non-uniform drawing speed. This automatic film applicator coater ensures an accurate and reproducible application of coating materials, adhesives and similar products.

- Adjustable start and stop position, start position with relocatable clamp feature
- For use with almost all film applicators, and can be used with several applicators at the same time.
- Double sided glass plate for dual-purpose operation: one side with printing blanket for wire-bar applicators and profile rods, on the other side glass surface for other applications
- Easy to handle
- Reliable results
- Modern and functional design

Technical Details

Drawing speed	0–99 mm/s; Option 250 or 500 mm/s
Application length	1-400 mm
Application width	1-300 mm
Dimensions	565 x 382 x 190 mm
Weight	20 kg
Power supply	100 – 230 V, 50-60 Hz.

Standards

ASTM D 823-95
