

## Lory Cup

Viscosity flow cup for the measurement of viscosity. Conventional cylindrical cup, with a needle fixed into the bottom, for quick measurements on-site or during production.

The cup is first dipped into the product to be measured, then emptied. The flow time elapses when the point of the needle appears.

### Features

- Ideal for quick measurements

### Technical details

Range	50-1100 cSt (indicative)
Dimensions	170 x 49 mm
Weight	130 g
