

# Strip Cutter

These strip cutters feature a double blade knife to prepare your samples. With this specially designed knife for cutting 10 mm, 15 mm, 20 mm, 25 mm (1 inch), 30 mm and 50 mm (2 inch) wide samples, you will always get the same sample width.

Strip samples are used for example with film, paper and tape in tensile, stretch, seal and peel tests.

For accurate and repeatable test results, it is essential to have identical samples. For example, an error of one millimetre in the width of the sample results in a deviation of 6% in the calculation of the average.

## Features

- Available in 10, 15, 20, 25, 30 and 50 mm width
- Ergonomic handle
- Replaceable blades, spare blades available.

## Technical details

Width 10, 15, 20, 25, 30, 50 mm  
Accuracy  $\pm 0.1$  mm
