

Film thickness gauge

Sturdy thickness gauge for the quick and efficient determination of the thickness of sheet materials like film, paper, board, leather, textiles, felt, rubber, sheet metal, plywood, plastic, foil, etc.

Many models available, both analogue and digital, with various presser feet, and resolutions of 0.1, 0.01 or 0.001 mm.

This particular model is especially laid out for measuring plastic film, with its 1 micron resolution on an easy to read digital readout, and a roller for measuring. Results can be displayed in either mm or inches. It features a convenient grip handle, thumb trigger and spring loaded, self-closing spindle. Comes in a transport/storage case.

Features

- Digital display with 0.001 mm resolution
- Measuring foot: roller 7 mm width

Technical details

Range	0 - 12 mm
Resolution	0.001 mm
Accuracy	0.012 mm
Throat depth	100 mm
Power	Li-pol battery
Calibration	ISO 17025
